

BEVIER HALL FACILITY IMPROVEMENT PROJECT

Bevier Hall renovation work will continue this spring and include significant improvements to the facility's exterior and mechanical systems. Life safety upgrades will address fire suppression systems, kitchen exhausts, and means of egress.

These improvements are happening thanks to the contributions of students! **Academic Facilities Maintenance Fund Assessment** fees are being used to perform this important work and reduce deferred maintenance backlog.

The Bevier Hall project team will attempt to minimize inconveniences by establishing scheduling in coordination with departments/units, combining tasks as practical, and reducing the duration of work in a given space. While every effort will be made to limit potential disruptions, some may occur due to the scale of the work.

Substantial completion is anticipated prior to the start of fall semester.

STARTING THIS SPRING

- Exterior masonry repair (continues through summer)
- Fifth floor roof replacement
Help by keeping windows closed to prevent noise, dust and odors from entering the building
- Basement and first floor sprinkler work

FOLLOWING COMMENCEMENT

- Mechanical equipment replacement in the café and kitchen areas
Be aware the hallway along these areas will be closed during this phase
- Second floor sprinkler work

COMPLETED WORK

- Ceiling and lighting replacement in classrooms 132, 166, 242, and second floor student lounge
